

Intro to Computer Programming: Layout

This week's homework:

Synopsis:

- Use HTML <div> tags to control layout of web page with class assignment links.
- Start communication with your fellow team members on your class project.

Details:

1. Read HTML layout from w3schools web site: http://www.w3schools.com/html/html_layout.asp
2. Either redesigned your web site's home page or create a new static HTML page using <DIV> tags to create a layout of
 - a. header
 - b. menu bar
 - c. main content
 - d. footer
3. The menu bar should contain links to all of your past assignments and used for future assignments.
4. The w3school page has an example, but another example is Keaton's home page: <http://keaton.ohsu.net/>
5. If a new page is created a link to it should be added to your site's home page.
6. Email me when you are done.
7. And last start an email discussion with your chosen teammates on the class project you have chosen to do.
 - a. I want to be CC'ed on all email between team members about their project.
 - b. So keep those emails on topic only.
